The global Synthetic Quartz Glass UV-LED market was valued at 172.89 Million USD in 2021 and will grow with a CAGR of 16.64% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Light Emitting Diode (LED) is a solid-state semiconductor devices, which can convert the energy from an electric current into light. UV-LED is a kind of LED. Below the visible spectrum lies a band of wavelengths called ultraviolet (UV). Ranging from 100 to 400 nm, the radiation can effectively be used to sterilization, perform forensic analysis, cure materials and disinfect water, among many other applications. The Asia-Pacific region is the world's largest exporter and manufacturer of synthetic quartz glass UV-LED market. Europe is the second largest market for synthetic quartz glass UV-LED sales in 2018. In the industry, LG Innotek had the highest profit in 2018 and in recent years, while Honlitrionics and Seoul Viosys ranked second and third respectively. Due to different strategies, the market share gap continues to widen. Synthetic quartz glass UV-LED technology is still immature, and new companies cannot surpass existing well-known brands in the short term in terms of reputation and design. Therefore, the research team recommends that new entrants need to be carefully considered before entering this field.
