A syringe is a simple reciprocating pump consisting of a plunger (though in modern syringes, it is actually a piston) that fits tightly within a cylindrical tube called a barrel. The plunger can be linearly pulled and pushed along the inside of the tube, allowing the syringe to take in and expel liquid or gas through a discharge orifice at the front (open) end of the tube. In terms of product types, syringes and needles mainly include conventional syringes and needles, safety ones and pre-filled ones. In 2019, the shares of global revenue of safety and pre-filled syringes and needles were basically the same, 37.33% and 35.69%, respectively, accounting for a higher proportion than traditional ones. From the perspective of application scenarios, hospitals and clinics consume a large amount of syringes and needles, accounting for 70.13% of global sales in 2019. The Asia-Pacific region, Europe and the US are the regions with the largest syringes and needles consumption, with the Asia-Pacific region consuming 39.83% of the total in 2019, Europe 26.12% and the US 19.33%, respectively.
