Abstracts

The global System on Module (SOM) market was valued at 142.27 Million USD in 2021 and will grow with a CAGR of 14.22% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The System on Module, which is sometimes referred to as a Computer on Module (CoM), is an alternative to single board computers for embedded systems offering a more flexible and contoured solution. It is designed to plug into a carrier, or base board, and is generally a small processor module with a CPU and standard I/O capability. The complex effort associated with designing a CPU subsystem is avoided by using SoM functionality and a custom base board. A System on Module (SoM) offers a unique approach to product development and the often fully custom electronics typically contained within sophisticated devices. A SoM helps system designers realize a fully customized electronics assembly, complete with custom interfaces and form factor without the effort of a ground-up electronics design. A SoM is a module that contains a processor with CPU bus accessibility, memory, and standard I/O. It is usually an Off-the-Shelf component. . The module does not have any connectorization and is designed to be plugged into a Carrier Board. Within the next few years, the majority of SoM are expected to be equipped with ARM architecture CPUs as more and more multicore processors are being introduced nowadays on portable devices. X86 products are still highly competitive and non-replaceable among industries that need better efficiency and

accuracy. And it is likely to eliminate Power architecture SoM from the market in a decade unless they are still no safer than the Power architecture SoM. Industrial automation is a key facet of global manufacturing industries, with enterprises facing enormous pressure to automate and integrate to maximize output, improve cost-efficiency, and generate tangible competitive value.
