Abstracts

The global Systemic Lupus Erythematosus (SLE) Drugs market was valued at 166.89 Million USD in 2021 and will grow with a CAGR of 6.22% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

SLE is the most common form of lupus and is also called lupus. It is a chronic, autoimmune disease with signs and symptoms that can last for six months or for many years. It can affect any part of the body, such as the skin, joints, and organs (LFA, 2012). SLE occurs when the immune system produces autoantibodies, which attack and destroy healthy tissues in the body rather than foreign infectious agents. These autoantibodies cause inflammation, pain, and damage. It is also known as a disease of flare-ups and remissions and can range from mild to life threatening in severity. No cure for SLE yet exists. Global Systemic Lupus Erythematosus (SLE) Drugs market is projected to grow due to high prevalence of autoimmune diseases particularly systemic lupus erythematosus (SLE). Major drivers for global systemic erythematosus drugs market are development of novel SLE therapies, increasing availability of bio similar drugs and increasing support for emerging research areas for new drug molecules. At the same time, increasing awareness of disease diagnosis and treatment as well as consistent research and development processes for novel drug molecules are important drivers for global lupus erythematosus market. Additionally, safety and quality of systemic lupus erythematosus controlling therapy may possibly be a challenge for the growth of the

global systemic lupus erythematosus drugs market. Moreover, numerous public awareness programs targeted to increase awareness levels are also being accompanied. For instance, Lupus Foundation of America (LFA) has been implementing various projects to increase central support for SLE research and services to support people and families affected by SLE. However, serious side effects with steroids, sensitivity with antibiotics, limited usage of Benlysta for severe SLE patients, and stringent regulatory approvals for new treatment options with better levels of efficacy and safety are obstructing the global systemic lupus erythematosus drugs market.
