The global TCB Bonder market was valued at 32.15 Million USD in 2021 and will grow with a CAGR of 20.24% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Thermo Compression Attach. Using this technique, there are no adhesives to join the die and the package. Instead, heat and force are applied to the die in a process called 'Thermo Compression Bonding'. The bumps are forced against their opposing pads and a second metallic bond is formed where the bond comes into contact with the package metallization. This technique typically requires the use of heat as high as 350? to 400?C, and forces of as much as 100 g/bump. Thermo Compression Bonding (TCB) is a chip attach technology under investigation and implementation in multiple platforms. The global TCB Bonder market is driven by increased TCB Bonder usage: memory applications currently, logic devices next. Meanwhile, TCB Bonder is gaining market share from wire bond assembly processes. Also, lower throughput coupled with higher processing costs was example of challenges in the TCB technology. The leading enterprises in the TCB Bonder market are ASMPT (AMICRA) (HK) and K&S (US), which followed by Besi (NL), Shibaura (JP), SET (FR), and Hanmi (KR). These Top companies currently account for more than 91.03% of the total market share and are expected to retain their dominating hold over the market during the forecast period. North America TCB Bonder market would keep being the largest market, followed by

Europe in 2018. Japan market and China market would rank forth (12 units) and fifth (11 units).
