### Abstracts

The global Teeth Whitening market was valued at 5888.15 Million USD in 2021 and will grow with a CAGR of 3.51% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Teeth whiteners may be applied by dentists in a dental clinic, dispensed by dentists for home-use, or bought over-the-counter. Teeth whitening products are mainly of two types, viz. peroxide-containing bleaching agents and whitening toothpastes. Bleaching agents contain peroxide(s) that help remove deep and surface stains. Non-bleaching agents, on the other hand, contain substances that have physical or chemical action that only removes surface stains. The rising demand for cosmetic dentistry is estimated to drive the growth prospects for the global teeth whitening market until the end of 2023. It has been noted that a large number of consumers opt for dental veneers, crowns, whitening procedures, and inlays or onlays cosmetic treatments to improve their dental health and appearance, which, in turn, will boost the demand for cosmetic dentistry and propel the growth potential of the global teeth whitening industry. Also, since the teeth whitening process is easy, the preference for these products will further grow. Furthermore, the increasing concentration on appearance, increased awareness via social media platforms, marketing of dental practices, and the growing media coverage, are some of the additional factors that will fuel market growth in the coming years.
