A laser rangefinder is a rangefinder which uses a laser beam to determine the distance to an object, which has been in use as early as the introduction of lasers; it is a useful optical method for measuring distance. LRF is based on time-of-flight method, and it employs light waves. This technique is based on a transmission of a short pulse of electromagnetic radiation and the reception of back scattered signals from a target.1. The global Laser Rangefinder market is valued at 1098 million USD in 2016 and is expected to reach 1516 million USD by the end of 2022, growing at a CAGR of 5.5% between 2016 and 2022.
