Abstracts

The global Temperature Management market was valued at 230.4 Million USD in 2021 and will grow with a CAGR of 1.81% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Target temperature management is an active treatment that tries to achieve and maintain a specific body temperature in a person for a specific duration of time in an effort to improve health outcomes during recovery after a period of stopped blood flow to the brain. The growth of the temperature management market is majorly driven by increase in the incidence of chronic conditions, development of technologically advanced intravascular systems, large number of awareness campaigns/conferences for physicians, and growth in research funding. However, the high cost of invasive temperature management systems and product recalls are restraining the growth of this market.
