### Abstracts

The global Thaumatin market was valued at 16.66 Million USD in 2021 and will grow with a CAGR of 5.25% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the thaumatin market, thaumatin is a low-calorie sweetener and flavour modifier. The protein is often used primarily for its flavour-modifying properties and not exclusively as a sweetener. The thaumatins were first found as a mixture of proteins isolated from the katemfe fruit (*Thaumatococcus daniellii* Bennett) of West Africa. Some proteins in the thaumatin family of sweeteners are roughly 2000 times more potent than sugar. Although very sweet, thaumatin's taste is markedly different from sugar. The sweetness of thaumatin builds very slowly. Perception lasts a long time, leaving a liquorice-like aftertaste at high usage levels. Thaumatin is highly water-soluble, stable to heating, and stable under acidic conditions. Firstly, as being the most intense natural sweetener thaumatin has the extraordinary property of enhancing the taste of lower quantities of salt and sugar in food products - so there is no loss of tastiness. Due to its characteristics, it is popular in the developed districts such as USA, Europe and Oceania. Secondly, compared to synthetic sweeteners which have many side effects to humans' health, sweeteners extracted from nature plants is beneficial to humans and is considered to replace the synthetic sweeteners. So thaumatin extracted from *thamatococcus daniellii bennett* is becoming popular in the world. The production

increases to 169.07 MT in 2016 from 138.47 MT in 2012. Thirdly, Europe is the main manufacturing region, much larger than other districts. In 2016, the production is 137.42 MT, which take 81.28% of the global production. USA and Oceania are the other two main manufacturing districts.
