Thermal paper is a special paper type that is manufactured with specialty coating that aids in inkless printing. On application of heat to the coating, a clear image is formed on the paper with no requirement for ribbons or inks. The coating usually turns black on heating, which, in turn, transfers the image to the paper. Thermal paper is the key component of thermal paper printing, which is considered one of the most economical printing technologies owing to its low energy consumption and low maintenance cost. At present, in the foreign industrial developed countries the Thermal Paper industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in the Japan, USA, Europe, etc. Meanwhile, foreign companies have more mature equipment, strong R & D capability, the technical level is in a leading position. But foreign companies' manufacturing cost is relatively high, compared with china's companies, the manufacturing cost is competitive disadvantage, as the Chinese Thermal Paper production enterprise technology continues to improve, their share in the international market is increasing, competitiveness in the international market gradually increase .
