Abstracts

The global Thermally Fused Laminates (TFL) market was valued at 110.76 Million USD in 2021 and will grow with a CAGR of 4.16% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The TFL is a melamine-saturated decor paper that is thermally fused directly to the substrate such as MDF or particle board. Particleboard and MDF are ideal substrates for TFL because they are consistent, uniform in strength and free of defects. More than 70% of global melamine consumption is for laminates and wood adhesives production. Laminates are found in products such as furniture, floors, kitchen cabinets and countertops, and walls. Wood adhesives based on melamine are found in a number of wood products including medium-density fiberboard (MDF), particleboard, and plywood. Melamine modified wood adhesives improve the durability and moisture resistance of the final woodboard. At the same time, most medium-density fiberboards (MDF) are processed into TFL. A small number of MDF are sold directly as raw materials. Overall economic performance will continue to be the best indicator of future demand for TFL. Demand in most downstream markets is greatly influenced by general economic conditions. As a result, demand largely follows the patterns of the leading world economies. Continued efforts to reduce formaldehyde emissions are likely to continue in all regions. This has a positive effect on TFL consumption since melamine is a strong formaldehyde-binding agent. So-called "low-formaldehyde" boards use more melamine-

modified wood adhesives in their manufacture. Increased melamine content results in reduced formaldehyde off-gassing. TFL is mainly used for furniture, interior decoration and store fixtures. In 2017, furniture application held 47.5% of the consumption market share.
