Thermally Modified Wood is referring to a wood which is modified by a controlled pyrolysis process. In this process, the wood is heated up to 180°Celsius, in the absence of oxygen. This process helps the chemical to change its cell structure of cell wall components in the wood in order to increase its durability. During this process, the low oxygen content prevents the wood from burning even at the high temperature. There are five thermal modification processes: Thermowood, Retification Process, Les Bois Perdure, Plato Process, and Oil Heat Treatment. Currently, there are many players in the market Thermally Modified Wood, Arbor Wood, Lunawood, SWM-Wood and some others are playing important roles in Thermally Modified Wood industry. The top three players are Stora Enso, Lunawood, Hardwoods. The market is not so concentrated for now and is seeing to be more dispersed.
