Abstracts

The global Thermistors market was valued at 947.73 Million USD in 2021 and will grow with a CAGR of 1.82% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A thermistor is a thermally sensitive resistor generally composed of semiconductor materials, and its resistance varies significantly with temperature. Thermistors are economical and stable, and operate in the temperature range that covers the whole range necessary for ordinary temperature control. They therefore are used in a wide range of applications. There is a wide use of thermistor sensors because of their advantages like small size, high accuracy and resolution, highest sensitivity, low cost, least power dissipation etc. However, presently available thermistor products are still far from fully meeting the market needs. The present market requires thermistors to achieve further reductions in cost, high precision, better interchangeability, and realise a wider measurable temperature range by going lower in the materials constant among various other requirements.
