Thermoforming is process of molding plastic sheet to desired shape using pliable temperature & pressure. Plastic sheets after molding is trimmed to form a usable product. Thermoformed plastics finds application in various food packing, appliances, healthcare products packaging, and in automobiles. Thermoforming plastics are preferred as the packaging material due to low cost and its aesthetic appearance of the products. The increasing usage of thermoformed plastics in food and healthcare packaging is expected to be one of the primary drivers for this market. Thermoformed plastics in the form of clamshells will be used extensively in the food packaging industries because of its superior resistance to bacteria, odor, and moisture. Furthermore, the injection molded plastics will be used for the manufacturing of medical disposables and medical devices because of their unique engineering and designing properties including surgical gloves, plastic scissors, urology disposables.
