The global Thermoplastic Compounding market was valued at 3351.42 Million USD in 2021 and will grow with a CAGR of 4.39% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Compounding consists of preparing plastic formulations by mixing or/and blending polymers and additives in a molten state, these blends are automatically dosed with fixed setpoints usually through feeders/hoppers. It is mostly a blend of copolymers such as ABS, SAN, SMA etc. with additives such as anti-oxidants, UV-stabilizers and other value adding agents and sometimes a strengthening component is added such as glass fibre. Plastics present a sustainable and low cost alternative to metals, wood and even ceramic materials utilized in varied industries. Rapid industrialization and expansion of said industries, including automotive, construction and electronics, specifically in emerging economies, is likely to influence consumption patterns & enhance demand over the forecast period.
