Thermostatic bath is a kind of indispensable precise temperature control equipment in thermal test measurement equipment, widely used in the thermometer, heat resistance, and other measuring instruments` verification field. Nowadays the most common constant temperature bath are water constant temperature bath and oil constant temperature bath with water or oil as medium. Thermostatic Baths are laboratory equipment that are used to incubate or maintain samples at a constant temperature over long periods of time. They consist of a metal or transparent plastic container that is filled with heated fluid. The most commonly used types are water bath and oil bath, others like sand baths, or silicone baths are often used for specific applications. Based on Bath Container Size/Capacity, Thermostatic Baths below 10 L composed of most market share, about 62% in 2016.
