Thick film ceramic substrate refers to ceramic substrate processed by thick film technology. The thick film ceramic substrate is a post-fired ceramic substrate. 'Thick Film' refers to the thickness of conductor layer on Ceramic Substrate. Normally the thickness will be at least exceeds 10 micron (um), around 10~100um, more thick than sputtering technology in Thin Film Ceramic Substrate. Of course thickness is less than DCB Ceramic board or FR4 board. Thick film ceramic substrates are produced by screen printing techniques. The material is printed on the substrate by a doctor blade. The thick film ceramic substrates industry has developed for many years and been continuing to mature. The market is dominated by the players from Japan and Taiwan, like Maruwa and Kyocera from Japan; Leatec Fine Ceramics and Holy Stone from Taiwan.
