Thin film solar cells refer to the fact that these types of solar cells use a much thinner level of photovoltaic material than mono-crystalline or multi-crystalline solar cells. The thin-film solar cells are made by depositing one or more thin layers, or thin film (TF) of photovoltaic material on a substrate, such as glass, plastic or metal. Thin-film solar cells are commercially used in several technologies, including cadmium telluride (CdTe), copper indium gallium diselenide (CIGS), and amorphous thin-film silicon (a-Si, TF-Si)Recent years, the sales of Thin-film Solar Cells industry are largely affected by the world economy. To the technology, the China market has a certain development space, but the popular Inverter in China made Thin-film Solar Cells market suffers greater pressure. New enterprise can cooperate with the leading company, such as Siemens, and also must strengthen the study of the product, to promote the company's products to obtain industry competitiveness and market share.
