Uninterrupted Power Supply (UPS) is an electrical System that provides emergency power to a load when the input power source fails. Uninterrupted Power Supply (UPS) converts incoming AC to DC through a rectifier, and converts it back with an inverter. Uninterrupted Power Supply (UPS) differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitor, or flywheels. The on-battery runtime of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment. Schneider-Electric, Emerson and ABB captured the top three revenue share spots in the Three-phase UPS market in 2015. Schneider-Electric dominated with 27.54% revenue share, followed by Emerson with 13.70% revenue share and ABB with 7.51% revenue share. Although sales of Three-phase UPS brought a lot of opportunities, for the new entrants with only advantage in capital without sufficient support in technology and downstream channels, the research group did not recommend taking risk the enter this market.
