The global Thyristor market was valued at 72.43 Million USD in 2021 and will grow with a CAGR of 4.26% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Thyristor is a solid-state semiconductor device along with four layered alternating p-type and N materials. The thyristor with three-lead is designed for controlling large current with the help of its two leads by combining the current with that of a smaller current from its other lead which is known as the control lead. The two-lead thyristor are used in switching if the potential difference between its lead is large. The thyristor is also known as silicon-controlled rectifier. It is used to manage elements in phase angle triggered controllers, which is also known as phase fired controllers. It can also be used for low conduction losses of Bjt, this would help to fulfill demand in the current electric system. The industry concentration is high, and the main production enterprises are concentrated in Europe, United States and Japan. Infineon, ON Semiconductor, Mitsubishi Electric, STMicroelectronics are in a dominant position in global market, forming the first echelon in the market competition of thyristor in the world. Of the major suppliers of thyristor, Infineon Technologies maintained its first place in the ranking again in 2017. Infineon Technologies AG accounted for 18.59% of the global thyristor revenue market share in 2017. Other players accounted for 9.26%, 5.71% and 5.35% including ON Semiconductor, STMicroelectronics and STMicroelectronics, respectively.
