The global Tilapia market was valued at 114.71 Million USD in 2021 and will grow with a CAGR of 1.86% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Tilapia is the common name for nearly a hundred species of cichlid fish from the tilapiine cichlid tribe. Tilapia are mainly freshwater fish inhabiting shallow streams, ponds, rivers and lakes and less commonly found living in brackish water. Major factors driving growth of this market include the rising population, rising awareness of healthy consumption and growth in per capita income in emerging markets. However, pond rent increases, water pollution, lack of good breeding technology in emerging economies, and lack of technology for deep processing of food are expected to restrain the growth of this market. Asia-Pacific market is expected to become the fastest growing market, increasing product availability is the key point. Asia-Pacific is poised to grow at the highest CAGR during the forecast period owing to rising awareness about health care, increasing disposable income in this region, and rising focus of prominent players on the APAC market increasing diversification of product processing. The average price will fall further. The product average price declined in the past few years due to the technology development, the average price will keep this trend in the few future years due to increasing mature manufacturing technology and lowering cost of raw materials. Strong market competition is resulting in annual 2 percent price erosion.
