The global Tire Vulcanizer market was valued at 130.37 Million USD in 2021 and will grow with a CAGR of 1.36% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Vulcanizer is mainly used for the vulcanization processing of various rubber products, rubber belt, slab rubber, etc., considered as the advanced hot-pressing equipment for compression moulding of thermosetting plastics. Tire Vulcanizer as advanced hot-pressing equipment for thermosetting plastic compression moulding is mainly used for vulcanization processing of a variety of rubber products. According to the transmission system, tire curing press is mainly divided into mechanical curing press and hydraulic curing press. The marketization degree enhances unceasingly for Tire Vulcanizer market in recent years, most of electroacoustic company has been involved in international competition. Due to both the electro-acoustic industry technology intensive and labor intensive industry characteristics, Tire Vulcanizer manufacturing is undergoing a massive industrial transfer in the international scope. Production center has been transferred from Europe, USA, Japan to China. However, affected by the policy, China's market share decreased in recent years. Relatively speaking, Europe and Japan are relatively stable. The Entry Barrier of that industry is relatively high, as a consequence, there is a comprehensive obstacle in technology strength, certification, economies of scale and cost control ability, etc.. As the hydraulic curing press

accelerates its replacement of mechanical curing press, the latter's capacity utilization is lower than the former's in China. In the future, hydraulic curing press will completely replace mechanical curing press, whose capacity will gradually be eliminated.
