Titanium alloys are metals that contain a mixture of titanium and other chemical elements. Titanium is considered to be one of the strongest metals. Its strength, heat, water and salt resistance, and its light weight make it the ideal metal for a variety of applications. These applications range from jewelry and dental implants to airplanes and ships. Pure titanium is strong and corrosive resistant. Titanium alloys retain the same strength and corrosion resistance, but takes on the greater flexibility and malleability of the metal it is combined with. Titanium alloys, therefore, have more applications than pure titanium. In the last several years, global market of Titanium Alloy developed rapidly, with an average growth rate of 4.5%. In 2018, global revenue of Titanium Alloy is nearly 4300 M USD; the actual production is about 207691 MT.
