A tracheostomy is a surgically created passageway through the front of the neck and into the trachea (windpipe). A tube is inserted through the hole and enable the patient breathing. This allows air to go to lungs, avoiding nose, mouth and throat and remove the secretions from the lungs. In rare cases, tracheostomy is permanent but the hole should be blocked when tracheostomy is no longer needed. This surgical procedure has several complications such as bleeding, permanent damage in vocal cord, and infections etc.The factors that drive the growth of global tracheostomy products market are increase in incidence of laryngeal or throat cancer and sedentary lifestyle. In addition, rise in demand for homecare services and availability of treatment options fuel the market growth. However, lack of awareness among people towards availability of such novel treatment devices and high cost of tracheostomy surgical interventions hamper the market growth. Conversely, rise in adoption of the tracheostomy products in emerging economies such as China, India, Japan, Singapore, South Korea, and Taiwan is expected to provide lucrative growth opportunities for the market.
