## Abstracts

The global Transcatheter Heart Valves market was valued at 234.38 Million USD in 2021 and will grow with a CAGR of 15.69% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The sales volume of transcatheter heart valves is increasing across several healthcare centers due to the growing prevalence of various heart diseases such as cardio valvular diseases, mitral regurgitation, and aortic stenosis require valve replacement. Increasing mortality due to chronic and end-stage cardiovascular diseases in the elderly population is a key concern for the healthcare providers across the world. As per the American Heart Association estimates in 2017, nearly 19.1 million deaths occur each year due to various cardiovascular diseases. In the U.S., heart disease is a leading cause of death, accounting for approximately 375,000 deaths per year. Rising geriatric population is leading to a significant burden on the healthcare system. As per the UN estimates, the geriatric population in the U.S. is expected to reach over 72 million by 2022. The growth of the target population coupled with growing risk of end-stage cardiovascular diseases is expected to improve the usage of these valves. Moreover, the benefits of minimally invasive surgeries and transcatheter heart valve implantation have been strongly advocated on the basis of PARTNER I and PARTNER II clinical trials.
