The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Transcranial magnetic stimulation (TMS) is a magnetic method used to stimulate small regions of the brain. During a TMS procedure, a magnetic field generator, or 'coil', is placed near the head of the person receiving the Tinnitus. The coil produces small electric currents in the region of the brain just under the coil via electromagnetic induction. The coil is connected to a pulse generator, or stimulator, that delivers electric current to the coil. TMS is used diagnostically to measure the connection between the brain and a muscle to evaluate damage from stroke, multiple sclerosis, amyotrophic lateral sclerosis, movement disorders, motor neuron disease, and injuries and other disorders affecting the facial and other cranial nerves and the spinal cord. Transcranial Magnetic Stimulators (TMS) is widely sales for Depression, Tinnitus, Alzheimer, Parkinson`s Disease, Psychiatric Disorders, Headache, Stroke, etc. The most proportion of Transcranial Magnetic Stimulators (TMS) is used for Depression, and the consumption proportion is about 20% in 2017. Europe is the largest supplier of Transcranial Magnetic Stimulators (TMS), with a production market share 38.5%. The second place is North America, following Europe with the production market share of 32%. North America is the largest consumption place, with a consumption market share

nearly 32.3% in 2017. Following North America, Europe is the second largest consumption place with the consumption market share of 26.9%, China is also an important sales region for the Transcranial Magnetic Stimulators (TMS).
