Transcutaneous Oxygen Monitor is the device used for transcutaneous oximetry (TcPO2 or TCOM), which is a local, non-invasive measurement reflecting the amount of O2 that has diffused from the capillaries through the epidermis. Today, transcutaneous oxygen monitoring is clinically prevalent in various applications such as wound-healing assessment, hyperbaric medicine, amputation-level resoluteness and others. Transcutaneous Oxygen Monitor consists of a combined platinum and silver electrode covered by an oxygen-permeable hydrophobic membrane, with a reservoir of phosphate buffer and potassium chloride trapped inside the electrode. A small heating element is located inside the silver anode. The oxygen monitor consists of a TcPO2 channel, for which high and low alarm limits can be set, a temperature display channel and a heat channel. As for the Transcutaneous Oxygen Monitor industry, the industry structure is relatively concentrated. The top 3 manufacturers occupied 79.26% of market share in 2015. The top 3 manufacturers are Radiometer, Perimed AB, and Philips. The Radiometer which has 60.48% market share in 2015 is the leader in the Transcutaneous Oxygen Monitor industry. The manufacturers following Clearblue are Perimed AB, and Philips which respectively has 10.15% and 8.63% market share in
