Transesophageal ultrasound transducers are used as an alternate way to perform a heart scan. A narrow probe with a specialized tip is inserted into the patient's esophagus and provides life-saving imagery and Doppler evaluation of the heart and the arteries around it. Doctors often use this option, known as an echocardiogram, when they want a more detailed image the sound waves can produce than the images obtained using a standard EKG. The global Reusable Transesophageal Echocardiography Probes industry has a rather high concentration. The major manufacturers are concentrated in North America, Europe and Asia Pacific, such as Philips, GE Healthcare, Canon, Hitachi, Siemens Healthineers. At present, Philips is the world leader, holding 35.18% revenue market share in 2020.
