The global Trifluoroacetic Acid (TFA) market was valued at 26.16 Million USD in 2021 and will grow with a CAGR of 3.31% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Trifluoroacetic acid (TFA) is an organofluorine compound with the chemical formula $\text{CF}_3\text{CO}_2\text{H}$. It is a colorless liquid with a sharp odor similar to vinegar, but stronger in acidity. Since it was discovered in 1922, trifluoroacetic acid has proved to be a significant chemical with very distinctive properties. TFA is widely used in organic chemistry for various purposes. Trifluoroacetic acid is a widely used intermediate for pharmaceutical and pesticide. One of the raw materials is hydrofluoric acid. So, the price of hydrofluoric acid has a major impact on that of trifluoroacetic acid. Also equipment used in factory must be taken anti-fluoro measures. Trifluoroacetic acid is mainly produced in China, North America, Europe and India. Companies in China started lately in producing TFA. In 2016, China is a leading region which produced 10882 MT TFA. Europe is the second largest production region with production amount of 8041 MT.
