The tower is an important element in the structure of a wind turbine. It transmits loads from the nacelle to the foundation and is a significant factor in determining profitability: the higher the tower, the higher the energy output. Depending on the specific needs of a given project, we supply different tower types. The tubular steel tower is a proven concept that delivers short installation time, optimized logistics, and excellent cost efficiency. Steel segments with a diameter of up to six meters are stacked and joined at the construction site. Tubular steel towers can reach more than 100 meters in height.

The global Tubular Steel Wind Tower market covers a product overview and overall scope to define the key terms and provides a client with a general idea about the market and its trends. HNY Research provides an in-depth analysis of the market such as key players along with their strengths and weakness. The report also contains the facts and key values of the global Tubular Steel Wind Tower market in terms of volume and sales, growth rate and revenue. The analysts have also evaluated the nature of the segments, product innovation, and growing investment in manufacturing activities that are expected to impact the global Tubular Steel Wind Tower market. As to the global market of wind towers, tubular steel wind towers are taking more than 95% of the market share compared with the rest taken by frame towers and concrete towers. Meanwhile in China where the landforms are quite complex, wind towers in a large power range are still needed. The biggest participators in wind energy Vestas and Siemens, just finished a great many of offshore wind farm projects in Europe over the first half of 2015, at the same time China and US added loads of wind farms with large scale wind turbines (lots offshore wind farms under construction). Moreover, the global wind power installed capacity will create a new annual record regarding the huge added amount in the first half of 2015 in China (10GW). There is no doubt the average size of wind turbines will increase faster than ever before, which may bring more challenges and opportunities to tower manufacturers to provide more robust towers.
