This is a minimally invasive surgical method to treat solid cancers, Special probes are used to ?burn? or ?freeze? cancers without the usual surgery. Computed Tomography (CT), Ultrasound (US) or Magnetic Resonance Imaging (MRI) is used to guide and position the needle probe into the tumor. This requires only a tiny hole, usually less than 3 mm via which the probe is introduced. When the probe is within the cancer it is attached to a generator which ?burns? or ?freezes? the cancer. The classification of Tumor Ablation includes Radiofrequency (RF) Ablation, Microwave Ablation, Cryoablation and others. The proportion of Radiofrequency (RF) Ablation in 2019 is about 65%, and the proportion of Microwave Ablation in 2019 is about 26%. Tumor Ablation is application in Liver Cancer, Lung Cancer, Kidney Cancer and Other cancers. The most proportion of Tumor Ablation is used in Lung Cancer, and the market share in 2019 is about 20%. North America is the largest consumption place, with a revenue market share nearly 38% in 2019. Following North America, Europe is the second largest consumption place with the revenue market share of about 28% in 2019.
