A Tunnel Boring Machines is a machine used to excavate tunnels with a circular cross section through a variety of soil and rock strata. They may also be used for micro tunneling. In Japan and China, the machines used for soil are called shield tunneling machines and machines used for hard rock are called tunnel boring machine. But in Europe and USA, they are called the same name tunnel boring machine. The research we did include all of them. Roadheader is kind of combine machine which could realize cutting, load, conveyor, automatic moving, spreading fog and cleaning dust. It almost uses on tunnel of coal mine, at recent years, the range of working of roadheader is greatly developing. It becomes mainly using on highway, railway, metro, national defense engineering project, water conservancy project, nonferrous metal and nonmetal mining tunnel, and mining exploring, etc. Tunneling machinery is a series equipment designed and built to withstand the harsh conditions associated with tunnel construction. In this report, tunneling machinery including tunnel boring machines and roadheader.
