Abstracts

The global Turboexpander market was valued at 260 Million USD in 2021 and will grow with a CAGR of 3.47% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Turboexpander is a machine, which continuously converts kinetic energy into mechanical energy. This is done by expanding the high pressure gas from upstream to a lower pressure downstream through the Expander. The high pressure gas causes the radial expander to rotate. Rotation is transmitted to the shaft, which is supported by a set of bearings. The power transmitted to the shaft can be used to drive a compressor, drive an electrical generator or can be dissipated through an oil brake or air brake. Asia Pacific is estimated to be the largest turboexpander market between 2018 and 2023. As per the BP Statistical Review of World Energy 2017, natural gas production increased from 490.6 billion cubic meters in 2010 to 579.9 billion cubic meters in 2016 in Asia Pacific, indicating a positive growth curve of the turboexpander market in this region. Factors, such as increasing investments in natural gas production plants are driving the Asia Pacific market for turboexpanders during the forecasted period.
