The global Turbomolecular Pumps market was valued at 100.46 Million USD in 2021 and will grow with a CAGR of 5.37% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the Turbomolecular Pumps market, which is a type of vacuum pump, superficially similar to a turbopump, used to obtain and maintain high vacuum. These pumps work on the principle that gas molecules can be given momentum in a desired direction by repeated collision with a moving solid surface. In a turbomolecular pump, a rapidly spinning fan rotor `hits` gas molecules from the inlet of the pump towards the exhaust in order to create or maintain a vacuum. At present, in the USA, Japan and Europe industrial developed countries the Turbo Molecular Pumps industry is generally at a more advanced level, the world`s large enterprises are mainly concentrated in the Europe and Japan, etc. accounted for most of the international market share. Meanwhile, these companies have more advanced equipment, strong R&D capabilities; the technical level is in a leading position. But foreign companies` manufacturing cost is relatively high, compared with Chinese companies, the manufacturing cost is competitive disadvantage, as the Chinese Turbo Molecular Pumps production enterprise technology continues to improve, their share in the international market is increasing, competitiveness in the international market gradually increase.
