TV Wall, or Video Wall, is a special multi-monitor (or a single large screen) setup that consists of multiple computer monitors, video projectors, or television sets tiled together contiguously or overlapped in order to form one large screen. Typical display technologies include LCD panels, LED arrays, PDP tiles, and rear projection screens (DLP). Video Wall Controller is the core component, which is connecting the computer directly to the video box for instant display on a large Video Wall. No special hardware is required, only a high resolution high speed transmission cable (DVI or HDMI or DisplayPort) is required to transmit signals from the computer to the video box. The video box tiles together a group of small panels to form a large video screen. DLP industry is in rapid development period, which has formed a complete and competitive industry chain, but DLP industry still has some problems. First of all, upstream raw materials are lack of concentration. Secondly, the main driving force comes from the vendors themselves (for example Barco, Vtron and Planar). Thirdly, industrial chain is relatively long and complex, resulting in inefficient system operation.
