Television White Space Spectrum is the frequencies available for unlicensed use of spectrum at location where spectrum is not being used by licensed services. There is no denying the fact that TVWS is one of the best candidates to curb the spectrum crunch that is being faced by the global communication scene. It not only offers better spectrum management but due to the inherent propagation characteristics of the UHF band is an economically viable solution. Not only developed nations are cashing on the advantages of TVWS technology but countries with minimal communication infrastructure are going for it because of its ease of deployment, being mainly in the license exempt regime, and serving large coverage areas. The TVWS device ecosystem and other standardization initiatives are coming up very fast and this technology is soon going to be a pervasive phenomenon in the global telecommunication landscape.
