Abstracts

The global Two-Photon Microscopies market was valued at 1638.23 Million USD in 2021 and will grow with a CAGR of 7.09% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Fluorescence microscopes use short-wave ultraviolet rays as the light source, and the observed specimens are mostly dyed with fluorescent pigments. Due to the irradiation of ultraviolet rays, the fluorescent substances in the specimens are excited to present visible fluorescent images. Because of the short wavelength of the light source, it has a high resolution that exceeds the resolution limit of traditional microscopes, and can directly display biochemical components such as labeled trace fluorescent antibodies. It has an incomparable role in immunology and clinical diagnosis. This report focuses on the investigation and research of fluorescence microscopes, including product categories such as confocal microscopes and two-photon microscopes, and secondly provides separate electron microscope product data. In terms of product types and technologies, there are mainly four types of fluorescence microscopes, wide-field microscopes, confocal microscopes and two-photon microscopes. Among them, the global two-photon microscope accounted for 8.84% of the fluorescence microscope market in 2019. From the perspective of product market applications, research institutions, schools, and hospitals are the main application areas. Among them, research institutions account for most of the overall application market, accounting for

41.81% in 2019. The world's fluorescence microscope industry is mainly distributed in Germany and Japan. Germany is represented by Leica Microsystems and Zeiss, while Japan is represented by Nikon and Olympus. The above-mentioned companies account for more than 64% of the world fluorescence microscope market.
