## Abstracts

The global Ultra High Purity Colloidal Silica market was valued at 259.89 Million USD in 2021 and will grow with a CAGR of 4.59% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Colloidal silica is silica particles that are suspended in a liquid. The liquid is denser than water and has been stabilized electrostatically to allow the particles to stay suspended in the solution. The silica particles are also very small and do not have a large density. If the particles are too large, they will settle out of the solution. If the silica particles are too small, they are difficult to stabilize in a solution. Colloidal silica is not only available in bulk deliveries, but also in plastic drums and IBCs. Ultra-high-purity colloidal silica mainly refers to electronic-grade colloidal silica. Due to the particularity of its application, generally speaking, the purity of ultra-high-purity colloidal silica is about 99.9999% or at least 99.9999%. Global Ultra High Purity Colloidal Silica key players include Fuso Chemical, Merck, Evonik Industries, Nouryon, Grace and Nalco, global top three players hold a share over 70%. Asia and Americas are the most important consumers, both have a share over 90 percent.
