The global Ultra Short Throw Projector market was valued at 57.15 Million USD in 2021 and will grow with a CAGR of 27.87% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Projectors with ultra-short throw lenses are designed to produce larger projected images at a shorter throw distance. This means that unlike the standard or long throws projectors; you can get the big picture even when you're caught in a tight space environment with much less space required between the projector and the screen. Gone are the worries about landing a tiny projected image or blocking out the projections with your shadows when you're using a standard/long throw projector in a space-constrained room. The China will occupy for more market share in following years, also fast growing rest of Asia regions. North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Ultra Short Throw Projector. The top players cover Epson, BenQ, Optoma, Hitachi, ViewSonic, Sony, Christie, Acer, LG, Infocus, Ricoh, Casio, Vivitek, Dell, Panasonic, Mitsubishi, Canon, Philips, Honghe Tech, NEC, COSTAR and etc., which are playing important roles in global Ultra Short Throw Projector market. Despite the presence of competition problems, due to the clear global recovery trend, investors are still optimistic about this area, in future still more new investment will enter into the field. Technology and cost are two major problems.
