## Abstracts

The global Ultrasonic Welder market was valued at 80.64 Million USD in 2021 and will grow with a CAGR of 3.2% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ultrasonic welding is the joining or reforming of thermoplastics or other materials through the use of heat generated from high-frequency mechanical motion. It is accomplished by converting high-frequency electrical energy into high-frequency mechanical motion. That mechanical motion, along with applied force, creates frictional heat at the plastic or other materials components' mating surfaces (joint area) so the material will melt and form a molecular bond between the parts. Ultrasonic welder is the equipment used in the Ultrasonic plastic welding process widely. First, for industry structure analysis, the Ultrasonic Welder industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top ten producers account for about 37.39% of the revenue market. Regionally, EU is the biggest production area of Ultrasonic Welder, also the leader in the whole valves industry. Second, the production of ultrasonic welder increases from 64533 Units in 2011 to 79185 Units in 2016, with an average growth rate of 3.78%. Third, China occupied 27.76% of the production market in 2015. It is followed by US and EU, which respectively have around 21.17% and 24.05% of the global total industry. Other countries have a small amount of production. Geographically, EU was

the largest consumption market in the world, which took about 26.05% of the global consumption volume in 2015. China shared 24.73% of global total. Fourth, for price trend analysis, a key variable in the performance of Ultrasonic Welder producers is raw material costs, specifically the speed at which any increase can be passed through to customers. Fifth, for forecast, the global Ultrasonic Welder revenue would keep increasing with annual growth rate with 2~4%. We tend to believe that this industry still has a bright future, considering the current demand of Ultrasonic Welder. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.
