Abstracts

The global Ultraviolet Disinfection Equipment market was valued at 1465.6 Million USD in 2021 and will grow with a CAGR of 15.89% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

UV disinfection system is an extremely environmentally friendly methodology to provide water, wastewater, process water, air and surface treatment. The key driving factors for the market are cost effectiveness as compared to other new disinfection methods, new government initiatives for UV disinfection, concerns of emerging nations to provide safe drinking water, environmentally friendly disinfection system and the use of UV led in disinfection saves energy. However, there are some restraints such as low cost of conventional disinfectants such as chlorine, lack of treating the residuals by UV disinfection equipment and decline in the share of food & beverage and surface disinfection applications. The key opportunities for the UV disinfection equipment market lie in healthcare & chemical industries for air treatment application and Millennium Development Goals (MDGs) of the UN for water treatment.
