The global Underwater Autonomous Vehicle (AUV) market was valued at 4.77 Million USD in 2021 and will grow with a CAGR of 20.25% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Underwater autonomous underwater vehicle is a kind of underwater unmanned vehicle.As the function of underwater autonomous underwater vehicle is further strengthened, its corresponding application is also popularized from the original military field to the civilian field.According to the survey, the global market size of autonomous underwater vehicle (uuv) increased by 11% year-on-year in 2018.Production reached 149 units, up 4% year on year.The research on intelligent underwater robots, which is expected to reach the compound growth rate of China in the next five years, started late but developed rapidly. In recent years, some companies have launched small models and put them into use.For example Deepinfar and so on.More than 250 autonomous underwater vehicles are expected to enter service over the next five years.In autonomous underwater robot technology research, the United States, Canada, the United Kingdom, France, Germany, Italy, Russia, Japan and other countries in the leading position.Among them, the most famous research institutes are Sea Grant`s AUV Laboratory of Massachusetts institute of technology (MIT), intelligent Underwater vehicle research center of Naval Postgraduate School (us), and Underwater Robotics Application Laboratory (URA) of university of Tokyo (Japan).In Harbin Engineering

university, Shenyang Institute of Automation, Chinese Academy of Sciences and the study of intelligent underwater robot technology related research institutions since the mid - 1980 - s, design during the 'number one' ocean underwater robot remote control type test model, and then developed the 'discovery', realized the automation in the field of 1000 m under the sea exploration, it is of great significance. In terms of intelligent decision-making and control, the 'intelligent water' series of underwater robots designed by Harbin engineering university have overcome many technical difficulties, and the corresponding technical indexes are gradually approaching to the engineering application. For example, the 'smart water 4' underwater robot can independently plan safe routes, draw target maps and identify underwater targets in the Marine environment. With the accelerating pace of human development of ocean. Underwater robot industry also gradually heat up, the form of a variety of purposes of underwater robot is active in the forefront of the Marine development, in addition to the traditional military in the field of application of intelligent underwater robot can also be used for underwater areas, such as: Marine surveying and mapping, and underwater construction, material transportation and daily training, etc. The intelligent underwater robot can be used for range test, torpedo identification, etc. The robot can be disguised as a torpedo as a target for daily training and torpedo performance test, and the intelligent underwater robot can be used as an acoustic target for submarine training.
