The global Urea Formaldehyde market was valued at 798.8 Million USD in 2021 and will grow with a CAGR of 5.4% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Urea-formaldehyde is a non-transparent thermosetting resin or polymer. It is produced from urea and formaldehyde. These resins are used in adhesives, finishes, particle board, MDF, and molded objects. UF and related amino resins are a class of thermosetting resins of which urea-formaldehyde resins make up 80% produced globally. Examples of amino resins use include in automobile tires to improve the bonding of rubber to tire cord, in paper for improving tear strength, in molding electrical devices, jar caps, etc. Growth in the automotive industry and increasing demand for electrical & electronics products are driving the global market for flat glass. However, the harmful and toxic effects of formaldehyde resins act as a roadblock to the market growth. The demand for good quality and economically viable adhesives and resins is expected to fuel the market of urea formaldehyde. Challenges include government legislation promoting sustainable products in lieu of UF adhesives and resins.
