The global Ureteroscopes market was valued at 666.76 Million USD in 2021 and will grow with a CAGR of 4.38% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ureteroscope is a medical device, which is thin tube like device with illuminating light and lens to capture images of complex urinary tract organs for the presence of calculi or tumors. It is passed through the urethra to the bladder and then into the ureter for the diagnosis and treatment of kidney stones. The device helps to understand the position of the kidney stone and also in treatment of kidney stone removal. It is a minimally invasive procedure to remove the kidney stone and has shown higher accuracy and least rate of complications when compared to traditional methods of kidney stone removal such as extracorporeal shock wave lithotripsy (ESWL), percutaneous nephrolithotomy (PCNL) etc. Kidney stone can either be removed by using basket attached to the ureteroscope or it can be broken down into fragments which are excreted through urine outside the body. Increasing incidence of kidney stones diseases and rising prevalence of urologic cancers globally owing to the changing dietary habits and climatic conditions are anticipated to boost the growth of the global ureteroscopes market during forecast period. Moreover, growing research and development activities in flexible video-ureteroscopes, invention of disposable ureteroscopes devices, and increasing adoption of technologically advanced ureteroscopes are also propelling the

growth of the global ureteroscopes market.
