The global Urinary Incontinence Devices market was valued at 155.53 Million USD in 2021 and will grow with a CAGR of 10.78% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Urinary incontinence is the unintentional leakage of urine that is differentiated into four types namely, stress urinary incontinence, urge urinary incontinence, overflow urinary incontinence, and functional urinary incontinence. Urinary incontinence most commonly affects women; however, with the increase in number of prostate surgeries the prevalence of stress urinary incontinence is set to elevate in men across the globe. Personal distress experienced by the incontinent patients is the major reason why patients seek effective and long-term solutions for the management of urinary incontinence. The key factors that boost the market growth include development of innovative urinary catheters along with rise in preference for surgical treatment of urinary incontinence to ensure early cure. In addition, rise in geriatric population that normally suffers from urinary incontinence or incontinence associated with chronic conditions (kidney stones, miscarriages, paralysis, and neuromuscular injury) also propels the market growth. However, increase in the unaware incontinent patient population is anticipated to hamper the market growth. Further, untapped economies offer profitable opportunities for the expansion of the market owing to the large population base along with modest penetration of the urinary incontinence devices in

the same.
