### Abstracts

The global Utility Locator market was valued at 4874.46 Million USD in 2021 and will grow with a CAGR of 3.24% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Utility location is the process of identifying and labeling public utility mains that are underground. These mains may include lines for telecommunication, electricity distribution, natural gas, cable television, fiber optics, traffic lights, street lights, storm drains, water mains, and wastewater pipes. North America is expected to account for the largest share of the overall market in 2018. The increasing concern for public safety and security and government efforts to avoid damage to pipelines and other utilities during the implementation of remodeling and infrastructure development initiatives facilitate the implementation of utility locating equipment and adopt utility locating services, which, in turn, propels the market growth in North America. The market in APAC is expected to grow at the highest CAGR during the forecast period. APAC is likely to witness a high adoption of utility locators owing to the rapid infrastructural developments and construction activities and adoption of 5G technology in countries such as India and China.
