The global UV Infection Control Device market was valued at 398.91 Million USD in 2021 and will grow with a CAGR of 6.26% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

UV Light refers to Ultraviolet light which is outside the visible light spectrum between wavelength ranges of 100 nanometers (nm) to 400 nm. UV Light is classified into three wavelength ranges: UV-C from 100 nm - 280 nm, UV-B from 280 nm - 315 nm, UV-A from 315 nm - 400 nm. Infection control used to be that washing hands and sterilizing tools and equipment with high temperature water was enough to keep patients, healthcare workers and visitors safe from viruses and bacteria. With the rise of more virulent viruses and antibiotic resistant bacteria in the last five years, healthcare providers are scrutinizing their infection prevention methods and are adopting new methods of disinfection. This is changing many providers' infection protocols as they make their best efforts to meet the new challenges that HAIs (hospital-acquired infections) present. With independent lab tests and peer-reviewed studies validating ultraviolet-C light's ability to quickly and effectively kill germs, UVC light disinfection systems have become increasingly popular with hospitals in the last one to two years. At the same time, many well-publicized incidents of healthcare-associated infections have occurred at hospitals, which has contributed to an increase in use of UVC light disinfection in hospitals. Now, use of UVC light disinfection systems has expanded

beyond inpatient settings. Other types of healthcare facilities, such as clinics, surgery centers, private practices, rehabilitation facilities and nursing homes, now are using the technology. The growing manufacturing sector in all regions is expected to generate demand and drive the UV Infection Control Device market during the forecast period.
