Vacuum Degassers is a kind of device used in drilling to remove gasses from drilling fluid which could otherwise form bubbles. The form of vacuum degasser can be horizontal, vertical or round vessel. A vacuum action is created to pull in the gas cut mud. When the liquid enters the tank it will flow and be distributed to a layer of internal baffle plates designed for the mud to flow in thin laminar film and is exposed to a vacuum that forces the gas to escape and break out of the mud. The vacuum pump moves the escaping gas from the vessel discharging it to the rig's flare or environmental control system. Nowadays, vacuum degassers are very specific products for their detailed utility on different area, their sizes and capacities are quite different from each other. Europe has the largest global export quantity and manufacturers in Vacuum Degasser market, while the North America is the second sales volume market for Vacuum Degasser in 2016. In the industry, M-I Swaco profits most in 2016 and recent years, while Reflex and IMI (Hydronic Engineering) ranked 2 and 3. The market share of them is 39.41%, 14.85% and 9.90% in 2016. The gap of market share is keep on enlarged due to different strategy.
