A Variable Displacement Piston Pump is a type of mechanical-electrical motor placed in a fluid channel. Built either to generate electrical power from the natural flow of fluid past it or to apply mechanical force to make stationary fluid flow in a pipe gives the variable displacement pump a dual use ? adjustable capability. Such pumps have versatile applications because they can be set to capture the maximum amount of hydraulic fluid energy as the velocity of fluid flow in a channel dynamically changes, or they can be switched to applying mechanical energy powered by electricity to increase fluid flow.As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties, and coupled with Variable Displacement Piston Pump industry in relative large supply on the market in the past few years, more and more companies enter into Variable Displacement Piston Pump industry, and according to our research, the analysis team find that there are so many manufacturers, the mainly companies includes Bosch Rexroth Corporation, Parker, Kawasaki Heavy Industries, Eaton and Danfoss.
