Sandwich panel is a kind of composite panel. Sandwich panels are made of three layers: low density core inserted in between two relatively thin skin layers. The most used materials for cores are expanded polystyrene, polyurethane, phenolic aldehyde, mineral wool. Sandwich panel is widely used in various architectural constructions as roof, wall, etc. Europe is the largest consumption market, with a market share over 35.12% in 2019. Following by Americas, which is the second largest consumption region with the consumption market share of 32.36% in 2019. While, the market size in APAC and Middle East Africa are relatively smaller due to the lower demand. The global average price of composite sandwich panels is in the increasing trend. With the situation of global economy and fluctuation of metal price, prices of composite sandwich panels will be in increasing trend in the following five years. The fire grade of composite sandwich panels includes A2 Fire Rated, B, C Fire Rated, D, E Fire Rated and F Fire Rated. Composite sandwich panel is widely used in building wall, building roof, cold storage and other field.
